

FES FM Ltd boasts an in-house team of over 500 personnel, inclusive of time served and apprentice trade workers, all dedicated to delivering excellence in total facilities management across a range of sectors from blue-chip corporate organisations to government and retail environments. FES FM Ltd is based in Central Scotland, with further regional offices throughout the UK. From Stornoway to London, Essex to Exeter, the team delivers services to clients nationwide. FES FM is recognised as one of the leading, rapidly growing independent service groups in the British Isles.

FES FM Ltd offers total facilities management, and is fully committed to delivering quality and value. The team provides a wide range of soft services including ground maintenance, cleaning and janitorial services and fleet management, as well as hard services such as the maintenance of mechanical and electrical systems, boilers and building fabric. FES FM also offers a life cycle management service; the skilled workforce will review and predict when equipment will need to be replaced, advise upfront how much this will cost, and manage the forecasted work throughout the long term contract.

FES FM also provides wider property management services; the team can help clients comply with health and safety, energy and environmental regulations, and can monitor energy consumption and bills to ensure costs are within reason and clients are getting the best deal possible. The team can also provide workplace management services, for example space planning for office desk moves or general churn requirements.

FES FM understands that business continuity is critical, which is the key reason that the company is controlled and managed from a central point. A highly efficient helpdesk operates, with staff on hand to respond to every need, communicating directly with the FES FM workforce who are strategically placed throughout the UK to provide a quick first time fix. This call centre facility can also handle booking systems on behalf of clients, whether it is booking a meeting room, catering services or managing third party lets such as sporting activities held at local schools.

A key benefit of working with FES FM is its cradle to grave approach. FES Ltd designs, builds and manages the construction elements of a project, before handing over to FES FM, which will operate and maintain the building as part of a long term, transparent fee package. In addition to this, FES FM has built an excellent reputation through its ability to deliver, and many new contracts are acquired through word of mouth and positive referrals.

FES FM has become a major national player operating UK wide, and has an annual turnover in excess of £28m. This is expected to double over the next five years due to confirmed new contracts. FES FM's long term goal is to build on its Scottish reputation and success, actively targeting locations throughout the UK to increase the visibility and prominence of FES FM Ltd as a leading facilities management provider.
